NAAN MUDHALVAN PROJECT
AI-BASED DIABETES PREDICTION SYSTEM
PHASE-3
DEVELOPMENT PART-1

PRESENTED BY
NAME:P.PARTHIPAN
REG.NO:422221106305
DEPT:ECE 3RD YEAR

INTRODUCTION:

We have implemented various methods or approaches to use our data systematically and in synchronized for the purpose of the development

Of our model. Moreover the test plan is according to our model and can be helpful if we wants to make further improvements and developments to our model.

Import Required Libraries:

```
# Ignore warning messages to prevent them from being displayed during code execution
import warnings
warnings.filterwarnings('ignore')
```

```
import numpy as np # Importing the NumPy library for linear algebra operations
import pandas as pd # Importing the Pandas library for data processing and CSV file handling
```

```
import os
for dirname, _, filenames in os.walk('/kaggle/input'):
    for filename in filenames:
        print(os.path.join(dirname, filename))
```

```
import seaborn as sns # Importing the Seaborn library for statistical data visualization
import matplotlib.pyplot as plt # Importing the Matplotlib library for creating plots and visualizations
import plotly.express as px # Importing the Plotly Express library for interactive visualizations
```

Load and Prepare Data:

```
df=pd.read_csv('/kaggle/input/diabetes-data-set/diabetes.csv')
```

UnderStanding the Variables:

```
df.head(10)
```

	pregnancies	glucose	BP	Skin thickness	insulin	BMI	Diabetes pedigree function	age	outcome

7   Age                   768 non-null    int64
8   Outcome               768 non-null    int64
dtypes: float64(2), int64(7)
memory usage: 54.1 KB

```

```
df.size
```

```
6912
```

```
df.shape
```

```
(768, 9)
```

Data Cleaning:

```
df.shape
```

```
(768, 9)
```

```
df=df.drop_duplicates()
```

```
df.shape
```

```
(768, 9)
```

Check null Values

```
df.isnull().sum()
```

```
Pregnancies      0
Glucose           0
BloodPressure     0
SkinThickness     0
Insulin           0
BMI               0
DiabetesPedigreeFunction  0
Age               0
Outcome           0
```

```
dtype: int64
```

There is no Missing Values present in the Data

```
df.columns
```

```
Index(['Pregnancies', 'Glucose', 'BloodPressure', 'SkinThickness', 'Insulin',
       'BMI', 'DiabetesPedigreeFunction', 'Age', 'Outcome'],
      dtype='object')
```

Check the number of Zero Values in Dataset:

```
print("No. of Zero Values in Glucose ", df[df['Glucose']==0].shape[0])
```

```
No. of Zero Values in Glucose  5
```

```
print("No. of Zero Values in Glucose ", df[df['Glucose']==0].shape[0])
```

```
No. of Zero Values in Glucose  5
```

```
print("No. of Zero Values in Blood Pressure ", df[df['BloodPressure']==0].shape[0])
```

```
No. of Zero Values in Blood Pressure  35
```

```
print("No. of Zero Values in SkinThickness ", df[df['SkinThickness']==0].shape[0])
```

```
No. of Zero Values in SkinThickness  227
```

```
print("No. of Zero Values in Insulin ", df[df['Insulin']==0].shape[0])
```

```
No. of Zero Values in Insulin  374
```

```
print("No. of Zero Values in BMI ", df[df['BMI']==0].shape[0])
```

```
No. of Zero Values in BMI  11
```

```
df['Glucose']=df['Glucose'].replace(0, df['Glucose'].mean())
```

Replace zeroes with mean of that Columns:

```
print('No of zero Values in Glucose ', df[df['Glucose']==0].shape[0])
```

No of zero Values in Glucose 0

linkcode

```
df['BloodPressure']=df['BloodPressure'].replace(0, df['BloodPressure'].mean())
```

```
df['SkinThickness']=df['SkinThickness'].replace(0, df['SkinThickness'].mean())
```

```
df['Insulin']=df['Insulin'].replace(0, df['Insulin'].mean())
```

```
df['BMI']=df['BMI'].replace(0, df['BMI'].mean())
```

Validate the Zero Values:

```
df.describe()
```

CONCLUSION:

We have pre-processed our data and made it useful and made it useful to the further implementation. Various missing values are replaced, many columns are deleted and converted into Numerical values in order to have positive impact on model.
